

Yeti Coolers are Certified “Grizzly Resistant”

Yeti hard-sided coolers were tested by the [Interagency Grizzly Bear Committee \(IGBC\)](#), a U.S. Forest Service Department of Agriculture Committee that works in both controlled and wild settings with grizzly bears.

The IGBC publishes minimum design and structural standards, inspection, and testing methodology for bear-resistant containers.

Yeti Tundra met the IGBC requirement both in the engineered test and the live bear test. The IGBC officially approved the Yeti Tundra and Roadie for use on public lands and national parks occupied by grizzlies.

If you’ve ever watched a grizzly bear peel open the door of a locked car like it’s a banana, you’ll be impressed by this video of a [grizzly attempting to open a Yeti Tundra cooler](#).
